

# Basin Taps, Bath Filler, Bath Shower Mixer

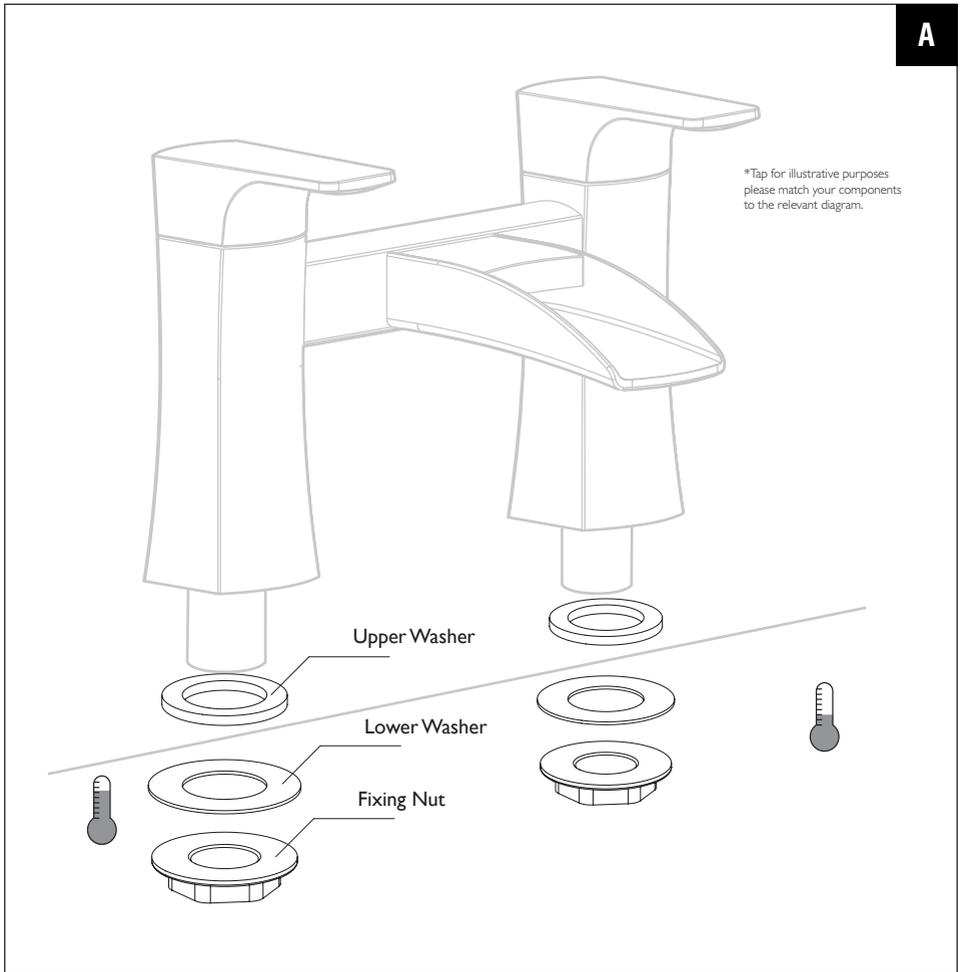

---

## **INSTALLATION & AFTERCARE INSTRUCTIONS**

This guide covers the installation of all basin taps, bath fillers and bath shower mixer variants. Please select the installation diagram suited to the basin taps, bath filler or bath shower mixer you have purchased. Taps shown are for illustrative purposes only. Please retain for future reference.

## FOR INSTALLATION OF BATH FILLER & SHOWER MIXER

A

1. Prior to installation flush out the pipe work to remove debris and then ensure the water supply is turned off.

2. Refer to diagram and ensure all components are present.

3. Fit the bath filler to the bath ensuring the washers and fixing nut are installed as shown.

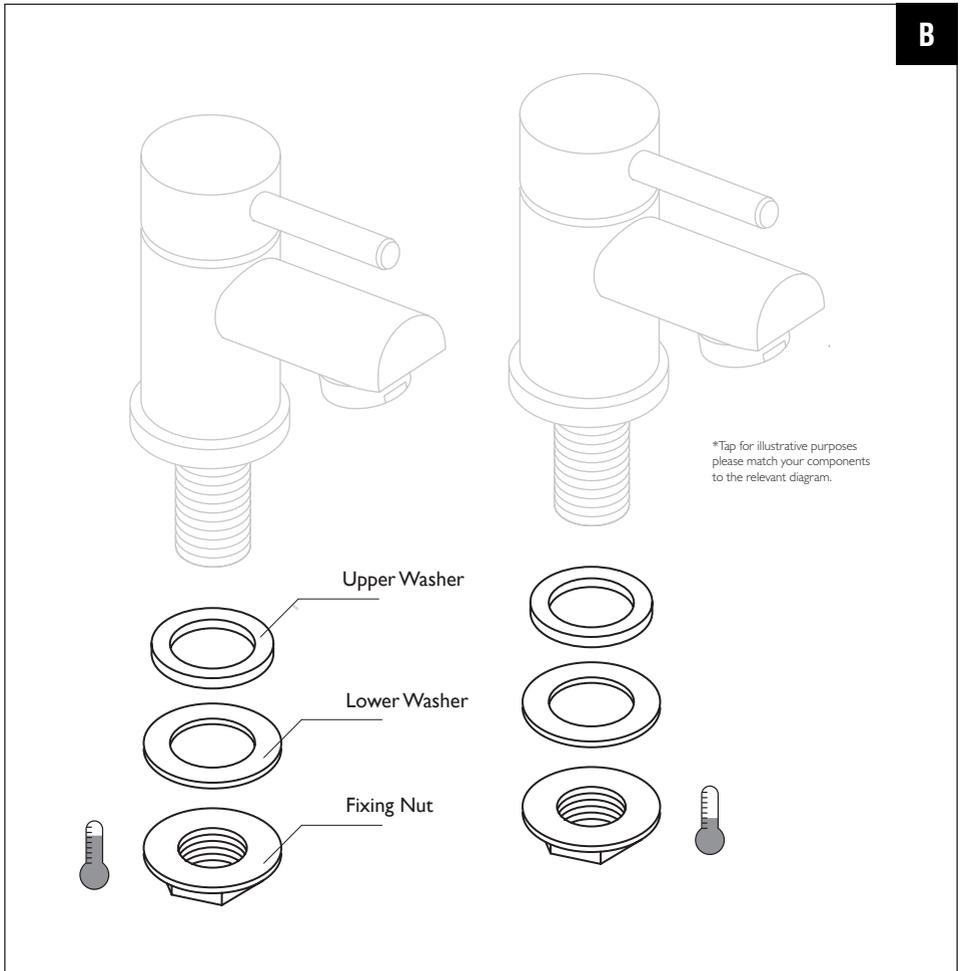

4. Connect to the water supply. Ensure the fitting is not cross threaded to form a watertight seal. The hot water supply should always be connected to the left hand leg.

5. Fully open both valves and allow to run for approximately 1 minute to fully flush the system.

6. Check all connections for leaks.

## FOR INSTALLATION OF BASIN TAPS/BATH TAPS

B

1. Prior to installation flush out the pipe work to remove debris and then ensure the water supply is turned off.

2. Refer to diagram and ensure all components are present.

3. Fit the taps to the basin ensuring washers and fixing nut are installed as shown.

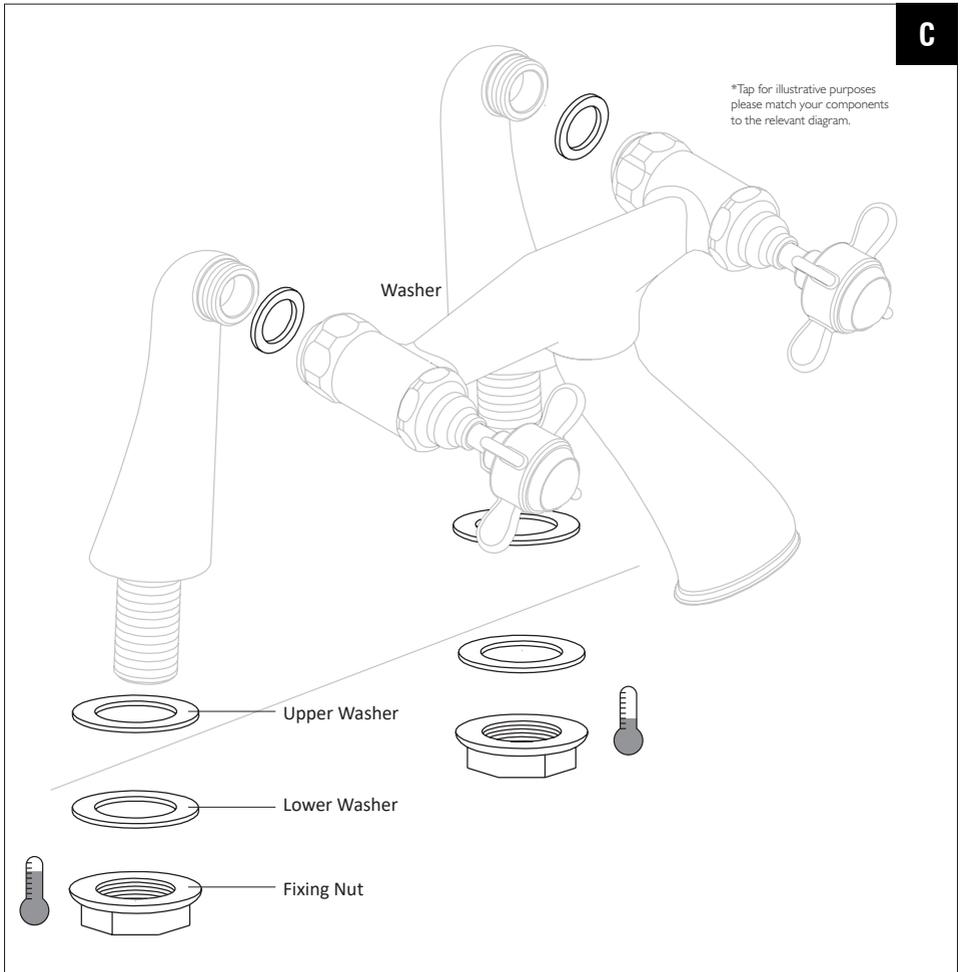

4. Connect to the water supply. Ensure the fitting is not cross threaded to form a watertight seal. The hot water supply should always be connected to the left tap.

5. Fully open both taps and allow to run for approximately 1 minute to fully flush the system.

6. Check all connections for leaks.

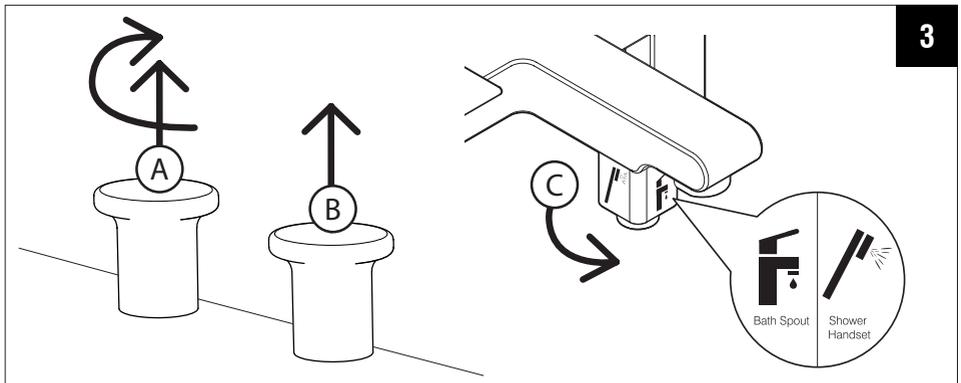

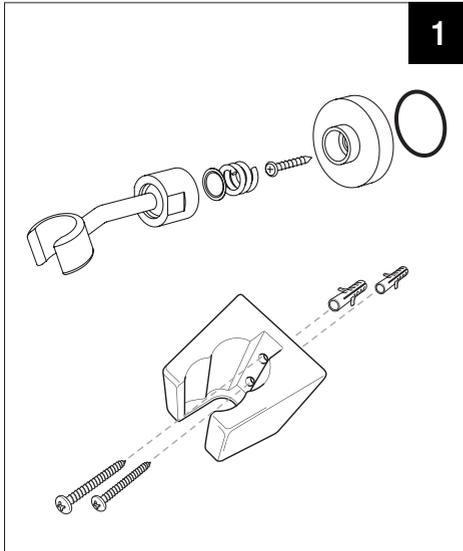

## PILLAR MOUNTED BATH FILLER & BATH SHOWER MIXER

C

1. Prior to installation flush out the pipe work to remove debris and then ensure the water supply is turned off.
2. Refer to diagram and ensure all components are present.
3. Assemble the tap body to the pillar legs.
4. Fit the bath filler to the bath ensuring the washers and fixing nut are installed as shown.
5. Connect to the water supply. Ensure the fitting is not cross threaded to form a watertight seal.
6. Fully open both valves and allow to run for approximately 1 minute to fully flush the system.
7. Check all connections for leaks.

## FURTHER INSTRUCTIONS FOR BATH SHOWER MIXERS

### 1. Installing a wall mounting bracket

Establish the desired position for the shower head wall mounting bracket. Check that the bracket is oriented correctly and that the shower head will reach by placing it temporarily in position.

**Caution:** before drilling check for hidden power cables and pipes. Take care when using power tools, especially near water. The use of a residual current device (RCD) is recommended.

The bracket can now be installed using the fixing provided.

### 2. Installing the shower hose

Attach the end of the shower hose with the nut to the thread underneath the spout, the smooth conical end should be attached to the shower head.

### 3. Using the shower

There are three diverter types.

**A** - Lift and turn the handle to divert water to the shower.

**B** - Lift the handle to divert water to the shower.

**C** - The diverter can be turned to switch from bath spout to shower handset.

## FURTHER INSTRUCTIONS FOR ITEMS WITH CERAMIC INDICES

- 1 To adjust the alignment of the handle in relation to the body, unscrew the bezel and ceramic indices from the top of the handle.
- 2 Unscrew the spindle bolt, and set aside with the spindle bolt washer.
- 3 Lift the handle off the spindle and replace at the desired angle using the micro adjustment teeth.
- 4 Re-attach the washer and spindle bolt and tighten.
- 5 Screw the bezel and ceramic indices assembly back onto the handle body.

The diagram shows an exploded view of a tap handle assembly. At the top is the 'Bezel and Ceramic Indices Assembly' (1). Below it is the 'Spindle Bolt' (2) with a 'Washer' (2). The 'Handle Body' (3) is shown with 'Micro Adjust Teeth' (3) on its top surface. The 'Spindle' is at the bottom. Arrows indicate the assembly sequence: the handle body is lifted off the spindle, the spindle bolt and washer are removed, the handle body is rotated, and then the spindle bolt and washer are re-attached, followed by the bezel and ceramic indices assembly.

## ADJUSTING CERAMIC INDICES

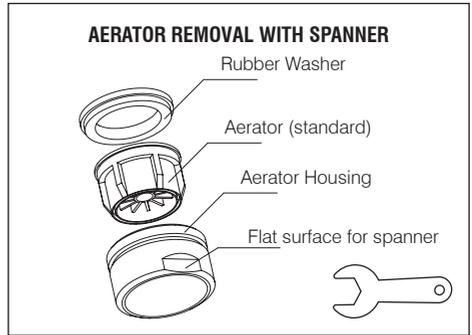

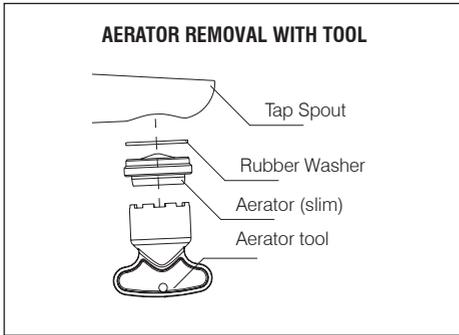

- 1 To adjust the alignment of the ceramic indices, first unscrew the bezel and ceramic indices assembly from the tap handle.
- 2 The ceramic indices are held in place by a threaded brass plate. Loosen the brass plate with a No. 16 Hex (Allen) Key, but do not remove from bezel.
- 3 Rotate the ceramic indices until the printed logo is at the desired position. You may need to screw the bezel and indices assembly back onto the handle body to check alignment and adjust as necessary.
- 4 When you are happy with the position, re-tighten the brass plate, making sure to hold the ceramic indices still.

The diagram shows the components of the ceramic indices assembly. At the top is the 'Bezel' (1). Below it is the 'Ceramic Indices' (2) which has the word 'COLD' printed on it. Below the ceramic indices is the 'Brass Plate' (2). At the bottom is the 'No. 16 Hex Key' used to adjust the brass plate.

---

## REMOVING AERATORS

There are two methods for aerator removal. refer to diagram below.

---

## AFTERCARE INSTRUCTIONS

Whilst this item has a high quality durable finish, it should nevertheless be treated with care. Surfaces should be cleaned using only a soft damp cloth and clean water & dried using a soft cotton cloth. Bath cleaning products, even non-scratch ones could damage the finished surface.
